

Belt Conveyor Metal Detector

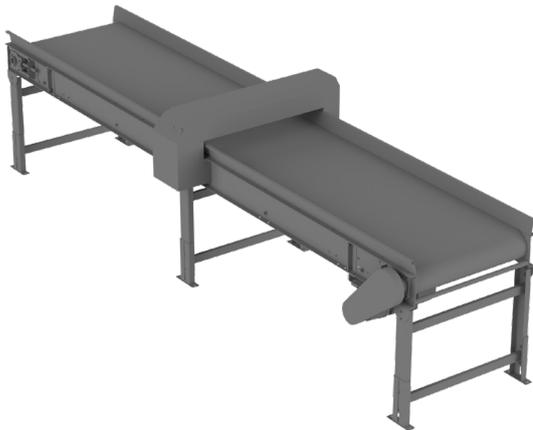

A modern metal detector is installed on a belt conveyor. It is used to remove any metal foreign matter from the processing line, it can be used either for raw or cooked material. Even the minimum filings are rejected. Some processes may require manual removal.

Removing of metal objects

Small amount of waste material

Adjustable sensitivity

Application in different places

- ⇒ Innovative and economical
- ⇒ Reliable
- ⇒ Easy to use
- ⇒ Easy maintenance
- ⇒ Tailor made size
- ⇒ Effective removal of metal objects

Application:

- ⇒ Fish processing
- ⇒ Meat processing
- ⇒ Poultry processing
- ⇒ Feathers processing
